**DETAILED ACTION**

***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8, drawn to a method.

Group II, claim(s) 9-15, drawn to an apparatus.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The technical feature common to both groups is a mold with inner and outer mold parts with an applicator on the inner mold. This technical feature is taught by Kern (US Patent No. 5,051,223).

Kern teaches a mold with an outer 1 and an inner connected to shaft 2 (a mold with inner and outer mold parts) with a prestressing nozzles 13 on the smoothing cylinder 5 (an applicator on the inner mold) (see col. 1, line 62 through col. 2, line 16 and the figure). Therefore, the common technical feature is not a contribution over the prior art; the groups lack the same or corresponding special technical feature.

**Further restriction is required under 35 U.S.C. 121 and 372:**

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species of applicator configuration:

- A. annular
- B. longitudinal
- C. within the rotor

The claims are deemed to correspond to the species listed above in the following manner:

Species A, Claims 2 and 10

Species B, Claims 3 and 10-13

Species C, Claim 4

The following claim(s) appear to be generic: 1, 5-9, 14, and 15.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The technical feature common to the species is taught by Kern as described above. Therefore, the common technical feature is not a contribution over the prior art; the groups lack the same or corresponding special technical feature.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply

must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
